Laboratory Services - Instructions for 24-Hour Urine Collection

About the collection container
Add urine to the 24-hour collection container using clean small urine cups or collection hat provided.
- The 24-hour collection container may contain a preservative.
- Do not dispose of the preservative.

CAUTION!  Keep containers out of reach of children!

Before collecting the specimen
Please plan ahead:
- The container with the urine sample must arrive in the laboratory within two hours that you last emptied your bladder.
- The 24-hour collection container must be kept refrigerated or on ice from the beginning of collection until the time you deliver it to the laboratory.
- For select tests there may be a set of dietary restrictions that should be followed. Please refer to Page 2 of the instructions for a list of tests with restrictions.

How to collect the specimen
- The 24-hour measuring period begins when you get out of bed and empty your bladder. Do not collect this urine, but do write down the date and time on the specimen container as the START TIME.
- Save all urine for the next 24 hours in the 24-hour collection container.
- In order to get correct results, all urine must be saved.
- TIME COMPLETED: The last urine sample should be the time you empty your bladder the next morning, 24 hours after the Start Time. Record date and time of this last urine collected on the specimen container.
- All urine must be collected for 24 hours, please contact the laboratory if an additional container is needed for the full collection.

After collecting the specimen
- Complete the information on the 24-hour collection container with: First and Last Name, Date of Birth, Date and Time Started, Date and Time Completed (Patient Height and Weight also required for Creatinine Clearance and Stone-Risk Orders).
- Bring 24-hour urine collection container with lab orders to the laboratory within two hours of the last collection.
- Blood work is required for a 24-hour Urine Creatinine Clearance test. Bring collected specimen and lab order to a Patient Service Center to have blood drawn.

Where to deliver your specimen
Concord Hospital Laboratory, First floor, Suite 1402 (Specimen drop-off only): Specimen Drop-off available 24 hours a day, seven days a week

Memorial Patient Service Center, Memorial Building, Suite 102 (Concord Hospital Campus):
